No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1, A Sequence 24, Sequence 10, Sequence 2, A Sequence 3, A Sequence 2, A Sequence 2, A Sequence 2, A Sequence 3, A Sequ

Patent No. 6329148
Patent No. 6329148
GENERAL INFORMATION:
APPLICANT: Rosen, Glenn
TITLE OF INVENTION: Synergistic Anti-Cancer Therapy with
TITLE OF INVENTION: Triptolides and Death Domain Ligands
FILE REFERENCE: SUN-109PRV2
CURRENT APPLICATION NUMBER: US/09/505,250A
CURRENT FILING DATE: 2000-02-15
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 3
LENGTH: 2161
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2161

Patent No. 5633145

GENERAL INFORMATION:
APPLICANT: M.Feldmann, P.W. Gray,
APPLICANT: M.J.C. Turner, F.M Brennan
TITLE OF INVENTION: Modified human TNFalpha (Tumor
TITLE OF INVENTION: Necrosis Factor alpha) Receptor
NUMBER OF SEQUENCES: 57

CORRESPONDENCE ADDRESS:
ADDRESSEE: Reed & Robbins
STREET: 635 Bryant Street
CITY: Palo Alto
STATE: California
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SOFTWARE: Patentin Release #1.0, version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/050,319B

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ALIGNMENTS

pCNV-SPORT6; Site_1: Not1; Site_2: ECORV (destroyed); RNA
source anonymous pool of 3 colons, age 26 yo male, 49 yo
female, 71 yo male colon; 46 yo male kidney, and pool of 2
stomachs, 62 yo male and 70 yo female. Library is
oligo-dT primed and directionally cloned (ECORV site is
destroyed upon cloning). Average insert size 1.4 kb,
insert size range 1:3 kb. Library is normalized and
enriched for full-length clones and was constructed by C.
Gruber (Invitrogen). Research Genetics tracking code

Library is oligo-dT primed and directionally cloned (ECORV site is destroyed upon cloning). Average insert size 2.1 kb, insert size range 1-3.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 036.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            BM546826

Site_2: NotI: The poly (A)+ RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then decapped
with tabacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including ECOR
I site by treatment of T4 RNA ligase and the first strand
cDNA was synthesized from oligo dT-selected mRNA by
priming with dT-tailed vector. The dT-tailed vector was
adjusted to have about GOT. The CDNA vector was
circularized with E. coli DNA ligase after digestion of
ECORI which site is also included in vector. An RNA strand
converted to a DNA strand by Oksyama-Berg method. The
obtained cDNA vectors were used for transformation of
competent cells E. coli ToplOF' by electroporation method.
The cDNA libraries constructed by this method are
full-length enriched cDNA library."

Note-Organ: Lung, Vector: pT73-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I: Site_2: Not I: Not_CGAP_DIO is a cDNA library containing the following tissue(s): A pool of Lung Focal Fibrosis. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oilgo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into PT73-Pac vector. The oilgonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the sequence that is located between the Not I site and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        838 ACCCCACCTGGGCTTCAGTCCCGTGCCCAGTTCCACCTTCACCTCCAGGTCCACCTT 897

These linkers separate the individual moeities by such a distance that each component of the fusion protein is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, dispinosis and assays for conditions madiated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive diabetes, multiple sclerosis, pulmonarty fibrosis and silicosis, cerebral malarla, allograft and xenograft rejection in graft verses host disease, sepsis, septic shock, inflammation, allergies and

```
The present invention relates to polymorphic variants of the tumour necrosis factor receptor 1 (TNRR1) gene. The present sequence is the coding sequence of the TNRR1 gene. The sequence of the whole gene is given in AAA95102, AAA95103 and AAA95104. The polymorphisms were identified by amplifying and sequencing regions of the gene. Twelve polymorphis loci were discovered. Of these twelve polymorphisms, four cause a change in the TNRR1 protein. The TNRR1 polymorphisms may be identifying targeting the biological function of TNRR1 as well as for identifying targeting the protein for treatment of disorders related to its abnormal expression or function such as tumours, apoptosis related disorders and bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300

The sequence is that of DNA encoding tumour necrosis factor alpha binding protein which was obtd. from a human placental cDNA library in lambda gill using a probe (AAQ20974). The DNA also encodes the extracellular domain of human TNF alpha receptor and as such it is useful for treating diseases where TNF alpha is involved as a causative agent, e.g. cachexia, sepsis and autoimmune diseases, specifically rheumatoid arthritis. See also AAQ20974.

This sequence encodes human TNF-alpha 55kD receptor . A placenta cDNA library in gtl0 was screened with probe AAQ29236. Ten hybridising clones were plaque purified and cDNA size determined by PAGE against an Eco RI digested phage DNA. The inserts of two cDNA clones were then sequenced. The coding region of the majority of the human TNF-alpha
New polypeptide capable of binding human TNF alpha - comprises first three cysteine-rich subdomains of TNF alpha receptor for treating autoimmune disease, septic shock, HIV etc.
                                                                                                                                                             tumour necrosis factor alpha; extracellular binding domain;
treatment; pulmonary diseases; septic shock; HIV infection;
malaria; viral meningits; graft versus host disease;
autolimnue disease; rheumatoid arthritis.
